

Name :- Parshant Mahadev Aartude
PRN - 18UIT72001xx
T4 - Batch

Problem statement - 18

Aim -

Write the member function and Procedures to determine age of person from the date of birth.

Analysis - Member functions are used to access the attributes of the object. Declaration of member function can be done while declaring the object type the object body contains the code of member function. Object body is declared using create type body statement.

Algorithm -

- 1) Create type person using member function.
- 2) Create type body for member function.
- 3) Insert record into the table.
- 4) Select the date of birth.
- 5) call the member function & get the result.
